CLIP SYSTEM® Exclusive to FIAMMA

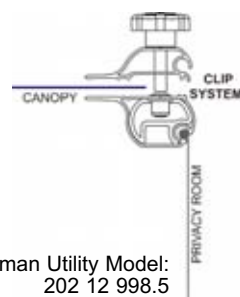

The perfect solution for your Privacy enclosure!

With the new Clip system the side panels of the Privacy are quickly and easily joined with the fabric of the awning. Just insert the side panels into the rail of the clip system (photo 1), place the clip system in the corner of the casebox (photo 2) and the support leg of the front panel. Then the upper part is fastened together with the lower part (photo 7). In order to guarantee a perfect seal the fabric of the awning is blocked between the lower and upper rail by screwing the knob. The front panel of the Privacy Room is inserted into the rail of the front of the awning (photo 4) and with the YKK zip it is then united with the side panels of the Privacy (photo 5). The clip system is also delivered with two vertical poles that are fixed between the side walls and the vehicle walls and the side sponges (photo 8). The new patented system function with the sandwich technology and is made of anodized aluminium. It is adaptable for awnings with a maximum extension of 250cm (could be compatible with awnings with shorter extension, for example F45 plus with extension 225 cm or the awnings of Omnistor). The clip system is standard delivered with the Privacy Rooms; it is however possible to buy it separately, in order to use it on Privacy Rooms already on the market.
