

Superior features of an Omnistor awning

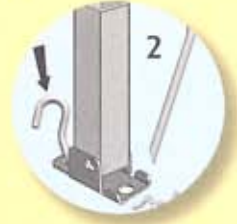

Product features that are standard on the majority of Omnistor awnings. These features increase product confidence and give added value to the awning and vehicle.

Support arm fixation to the vehicle side wall [1] or to the ground [2]

Side fixation

The support arms can easily be placed in the special holders on the side wall (all Omnistor awnings except the 5102, W-150 and 9005).

Ground fixation

By using the ground pegs the support legs can be fixed to the ground.

Telescopic hand crank with storage clips

All our spring arm awnings have a handy telescopic hand crank with two clips for storing the hand crank. Lengths are **102cm to 155cm** for the series 5 awnings and **130cm to 190cm** for series 6 awnings. The Omnistor 5102 has a folding hand crank, with the ultra rapid gear assy (no storage clips).

Support arms with Quick-Lock system

The support arms are easily released from the front profile. Thanks to the unique Quick Lock system – **undoubtedly the most user friendly system on the market** – you can adjust your awning to the correct height with ease.
