

... and that shows!

Safety

Security locks on both ends prevent the awning from opening whilst driving.

The locks automatically open when cranking out the awning.

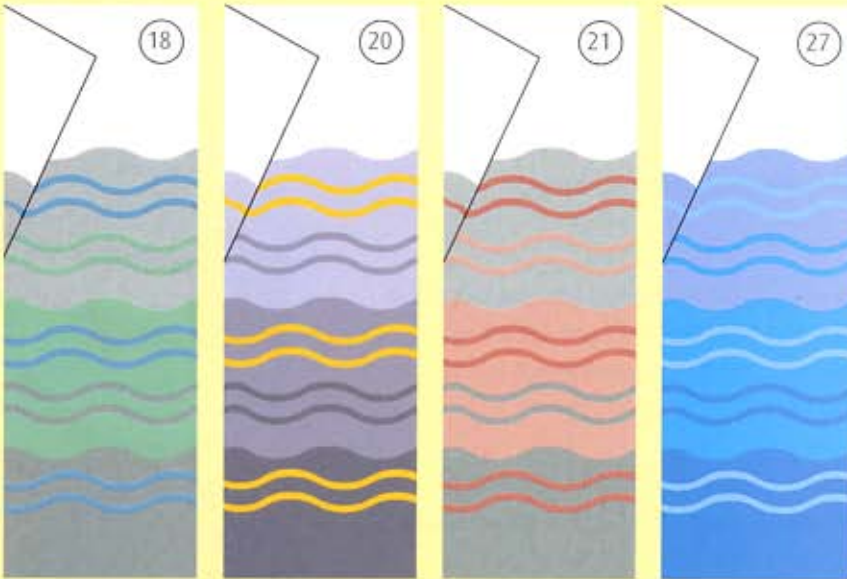

Extreme stability

The monobloc, this is the arm support that connects the retractable arm to the box and is made of DURALUMINIUM (Si1).

In relation to the monobloc, the spring arms hinge horizontally as well as vertically. In this way, upward or downward movements of the awning are absorbed and apply no extra pressure to the vehicle wall! This unique system gives extreme stability to the Omnistor awning.

Use **Omni-Cleaner** for cleaning the PVC awning fabric.

This user-friendly spray bottle contains no aggressive or harmful substances to ensure that the colours of your fabric stay clean and eye-catching. See page 29.

All Omnistor PVC fabrics are non-fading, waterproof and washable, can be stored when wet, are high frequency welded and stitched with weather resistant yarn.

The Omnistor PVC fabric consists of 5 layers (not for Omnistor Caravan style):

1. The top coat* of the PVC fabric resists scratching and fading.
2. Vinyl with painted pattern.
3. High strength polyester scrim.
4. Vinyl with painted pattern.
5. Top coat of the PVC fabric resists scratching and fading.

* The Omnistor PVC-fabric has a transparent protective top coat –not an ordinary coating– one that considerably increases the lifetime of the fabric.
