

Installation on the roof

For caravans and motorhomes

Fully equipped

Security locks on both sides

The Omnistor 6002 is an awning with retractable arms that can easily be mounted on the roof of a caravan or a motorhome.

• **Operation** The awning is very easy to operate. The advantages are the user-friendly telescopic hand crank (up to 190cm!), the built-in end stroke that ensures that the fabric cannot be rolled up incorrectly and the well-known Quick Lock System for easy adjustment of the support arms.

• **Construction** The retractable arms have twin cables for increased fabric tension. Automatic locking of the front profile prevents the awning from opening whilst driving.

• **Installation** Installation onto a flat roof (1) is done by using continuous transversal profiles. The adapter is installed onto these profiles (2 & 3) and can then be moved so that the awning fits perfectly to the roof edge or caravan rail which remains free! **Drilling through the roof is not necessary!**

For installation on a roof with rounded edges (4), specific adapters can be used. See page 27 for suitable adapters.

Installation kits always need to be ordered separately.

• **Comfort** Two clips are supplied as standard for storing the hand crank. Also supplied as standard are items for the installation of a Safari-Room by means of clips. The support arms can be installed to the vehicle wall by using the mounting brackets supplied or to the ground.

• **Extra** For awnings of **4m length upwards** a tension rafter is supplied as standard. A built-in 12V motor with emergency operation is available (5).

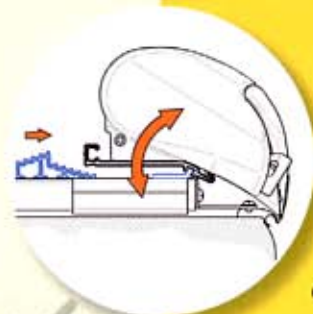

The motor cannot be installed retrospectively on a manual awning!

• **Colours**
