

Especially for caravans

Attractively priced

Extremely light and extremely stable

Elegant and modern design

The Omnistor Caravan style is an extremely user-friendly and light awning with a modern appearance and attractive price. It is the best awning for caravans and smaller vehicles, available in two new colours.

- **Operation** The awning is operated by hand (1). The support arms and tension rafters are equipped with the Quick Lock System (5).
- **Construction** The roller tube -also being the front profile- of the Omnistor Caravan style is cylindrical (2). Because of this, the fabric can be easily and smoothly wound in and out. The larger length of the front profile means that the **fabric is much wider** than awnings from other brands. Furthermore the front profile is more robust because of the larger diameter. The support arms and tension rafters are concealed in the roller tube and are easy to access for setting up the awning (4). All parts are stored in a PVC cover that can be slid easily into the caravan awning rail.
- **Installation** The Omnistor Caravan style is slid into the caravan rail. The cover is opened by means of a zip (3). This awning can also be easily removed from your vehicle. **New!** Two end plugs are supplied as standard. These plugs can be slid into the caravan rail and prevent the awning from moving in the rail.
- **Comfort** Your awning can be set up in seconds and set up takes little space. The support arms can be installed to the vehicle wall or to the ground. **New!** The tension arm guard (6) distributes the pressure on the caravan wall and prevents movement of the tension arms. It also has a wind security feature that prevents the tension arms from being pulled away. You can secure the tension arm guard with two bolts through the side wall if required.
- **Extra** A supplementary tension rafter is included as standard with awnings from 4,00m upwards, and is available as an option for lengths 2,60m and 3,50m.
- **Colours** 03 > Blue Sky 04 > Alaska grey
