

OMNI•BIKE lift

With hand crank or 12V motor

Easy installation of the bikes

Rails with Quickblockers

Fully equipped

The Omni-Bike lift is a bike carrier for 2 bikes, which covers a height of 70 cm. There are 2 versions available: with motor (12V) or with hoisting device and crank.

- **Operation** After lowering the bike rack into its lowest position, the bikes are easily installed and fixed in the bike rail by using the supplied bike holders. Just by pushing one button or by using the handcrank, the bikes are brought to their normal level. Use the straps to fasten the rack.
- **Construction** The frame is made of anodised aluminium with a 35mm diameter tube.
- **Installation** When the mounting height exceeds the standard height, an optional set XL arms can be ordered for installation of the bike rack at the required height. For heights up to 1,50m.
- **Comfort** The Omni-Bike lift is equipped with Quickblocker rails (3). One bikeholder for each bikeraill (1) and plastic covers for an aesthetic finish both inside and out. Two rack holders keep the frame carrying the bikes, in its upright position when not being used (2).
- **Extra** Can be extended to a 3 bike carrier.

Manual

weight 15,5kg
art.nr. 18522500
maximum capacity 50kg

With 12V motor

weight 15,9kg
