

Installation without drilling

Stylish design

Can be opened with closed fly net

Wide range of accessories

The Omni-Vent roof light is a modern and user friendly product. Many European manufacturers prefer to build in the Omni-Vent into their motorhomes or caravans. A free air flow is provided by a built in ventilation area of 100cm<sup>2</sup>, even in closed position.

• **Types** The Omni-Vent is available either with or without 12V fan. Two versions of fans are available:

The **standard Omni-Vent 12V** fan is a user-friendly model and is available within all budgets. This fan has 3 speeds for both extracting and intake by pushing an easy to use switch. Also available as a retro-fit kit for existing Omni-Vents.

The speed of the **Omni-Vent 12V with thermostat** can be continuously adjusted! By using the control buttons you can determine the speed of the fan and the temperature. Also available as a retro-fit kit for existing Omni-Vents.

• **Construction** The interior frame and curtain frame have been completely re-designed. Side operating mechanism allows a completely free central opening. The integrated hinge ensures that it is waterproof over the full length (3) also the large dimensions of the outer dome ensure that the water is drained away from the opening.

The roof light has an aerodynamic shape (4) so an extra spoiler is not necessary.

All parts are made of weatherproof synthetic material.

The outer ABS fixation frame guarantees a good adhesion and thus ensures better sealing.
