## • Comfort

Removable flyscreen (6) and roller blind (5) are standard and have been completely renewed! The fly screen is standard with the Omni-Vent roof light without 12V ventilator and can be opened very easily. The convenient roller blind is standard with every Omni-Vent and can be rolled up in three phases. The roof light can be **opened** while keeping the **fly net closed**. By using the winding knob the dome can be opened and set to **any required position**. An Omni-Vent roof light can be upgraded at a later date with a 12V fan, with or without thermostat.

## • Extra

In the curtain frame of the new Omni-Vent, optional **LED lights** can easily be installed (8).

**Important!** If you own the old type of Omni-Vent (grey), you will first need to replace the curtain frame with the new version. The lights are easily turned on/off by means of a switch.

**Art.nr. retrofit kit 23600200**

You can replace your old inner frame in no time by a new version (9) with a retractable fly screen and roller blind! Replacement set: **art.nr.23600100**

The Omni-Vent is available without a fan.

**The 12V kit** (10) can be purchased at a later date should you want to install a fan afterwards! Two versions are available (with or without thermostat) and both can be installed by using only 4 screws in your existing roof light.

The dome of an older Omni-Vent (< 2004) can be replaced with a new **transparent** dome without any problems and without having to change the inner and outer frame!

**Retrofit roof light: art.nr. 23330020.**
