

OMNISTOR•2000

Automatic roller system

Through its elegant design and reduced box dimensions this light weight awning is extremely suitable for small vehicles, caravans and automobiles. The box has a white finish.

Operation: The awning is easy to operate by hand. The awning is automatically retracted by a spring in the axle. The support arms are equipped with the well-known Quick-Lock System.

Construction: The awning has telescopic arms by which the projection can be determined. The awning can only be opened after unlocking the security lock.

Comfort: For the installation of a Safari-Room to a 2000 by means of clips, the connecting pieces are supplied as standard. The support arms can be installed to the vehicle wall by using the mounting brackets supplied or to the ground.

Warning: No supplementary rafter can be used for the Omnistor 2000.

Tip: A sun blocker can be added to your awning to filter the sunlight and protect against the heat. (see page 24)
