

SAFARI-ROOM 5800 & 6802

front

side

RIO

PARIS

Safari-Room with velcro fastening

These two types of Safari-Room are designed especially for the Omnistor 5800 and 6802. For lengths of 4m upward the projection is 2,75m and the connection between the awning fabric and side panels is done by velcro for a more wind proof connection.

Comfort: From 3m onwards the front panel window has a zipper. The left hand side panel has a mosquito screen and PVC curtain. Optional curtains available in Rio blue (3 windows art.nr.21500025, 4 windows art.nr.21500125) and in Paris-green, with seamed edges (3 windows art.nr.21500225, 4 windows art.nr.21500325). For 5 metre and upwards always order a 4 curtain set!

Installation: Is done in the same way as for the normal Safari-Room (see page 20). The side panels are equipped with a rail profile that can be slid into an existing rail so that a complete connection between vehicle and side panel can be made.

 **Tip:** Use the Hold Down Kit to prevent the awning and Safari-Room from flying up, see page 24.
