

Roof Boxes in very solid ABS+

The s-class roof boxes are through their modern and elegant design, advanced technique and durability a special class in the roof box section.

Operation: The boxes have a watertight security lock with key. The box is automatically locked with one simple movement.

Construction: The double profile has been integrated into the box resulting in a rivet and bolt free construction. The boxes are made of ABS-PLUS material which is resistant to shocks and weather conditions. The aluminium profile has been lacquered on the outside to give the box an extremely aesthetic appearance.

Comfort: The boxes are equipped with one or two gas springs. For a quick and solid installation, a rail with predrilled holes is supplied as standard in the Top-Box s-class tour, combi and super combi in grey.
