

## Roof light, installed without drilling!

This double glazed roof light has an outer dome made of weatherproof ABS material. A free air flow is provided by a built in ventilation area of 100cm<sup>2</sup>, even in closed position. The roof light is available in a white, translucent and transparent version (see p. 48).

**Types:** The Omni-Vent is available either with or without 12V fan. Two versions of fans are available: Omni-Vent 12V and Omni-Vent 12V Thermostat. Both types meet the CE and EMV standard (see page 46 for further information).

**Construction:** Side operating mechanism allows a completely free central opening. The powerful 30cm dia fan has 10 blades. The Omni-Vent is waterproof due to the large dimensions of the outer dome which ensures that the rain water is drained away without the possibility of infiltration. Integrated waterproof hinge with rail.

Aerodynamic design through built-in spoiler. All materials used are made of weatherproof synthetic material.

The outer ABS fixation frame guarantees a good adhesion and thus ensures better sealing. By using a clamping system, the roof light can be mounted without the need to drill through the roof. **This offers the best guarantee against water ingress!**

**Comfort:** Removable flyscreen and roller blind are standard! An Omni-Vent roof light can be upgraded at a later date with a 12V fan, with our without thermostat.(see page 46).
