

An Omni-Vent without fan ...

The Omni-Vent is available without a fan. The roof light has an aerodynamic shape so an extra spoiler is not necessary. Fly screen and roller blind are standard. The side operating mechanism allows a completely free central opening.

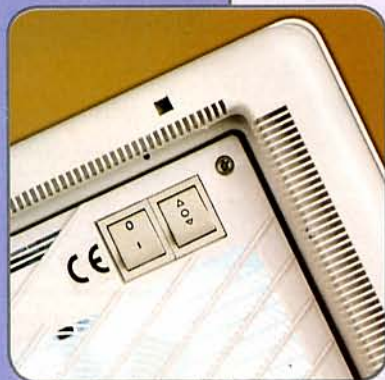

...can be upgraded at a later date!

The 12V kit can be purchased at a later date should you want to install a fan afterwards!

Two versions are available (see info hereafter) and both can be installed by using only 4 screws in your existing roof light.

With or without thermostat?

12 Volt fan

The standard Omni-Vent 12V fan is a user-friendly model and is available within all budgets. This fan has 3 speeds for both extracting and intake by pushing an easy to use switch. Also available as an extension kit.

min. consumption	max. consumption	max. air flow	ø fan
0,8 A	5,0 A	30m ³ / min.	300 mm

12 Volt fan with thermostat

This type of fan is equipped with a thermostat. Furthermore the speed of this 12V fan can be continuously adjusted! By using the control buttons you can determine the speed of the fan and the temperature. Also available as an extension kit.

min. consumption	max. consumption	max. air flow	ø fan
0,2 A	5,0 A	30m ³ / min.	300 mm
