

OMNI•VENT transparent

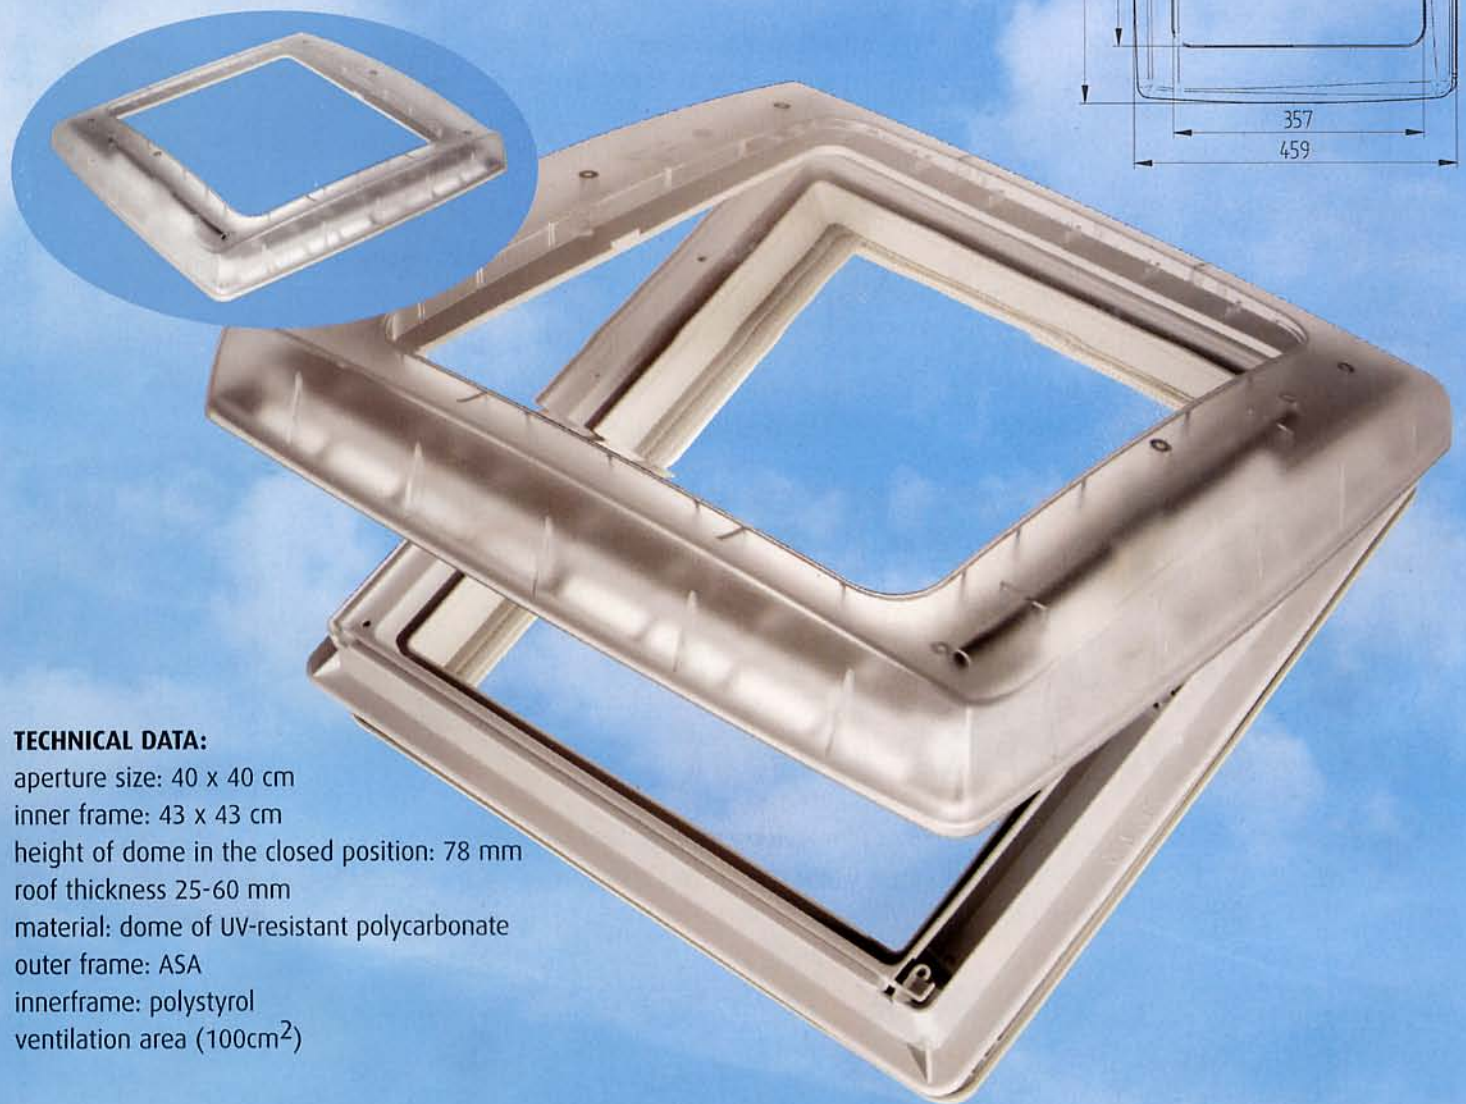

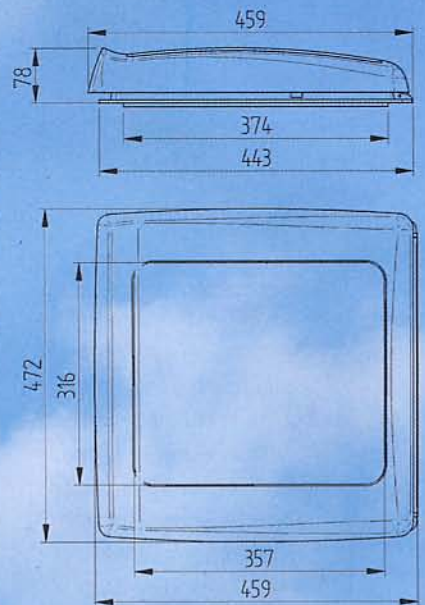

With transparent cover

Bring more light into your vehicle by installing an Omni-Vent roof light with transparent dome!

This roof light has all the excellent qualities and advantages of the traditional Omni-Vent. The dome is made of completely transparent and UV resistant synthetic material which is very maintenance friendly. The ventilation area (100cm²), which provides free air flow, has been integrated into the non-transparent section of the Omni-Vent. The modern design with its rounded shape and built-in spoiler gives this roof light an extremely aesthetic aspect.

The dome on the white and translucent Omni-Vents can be replaced with a transparent dome without any problems and without having to change the inner and outer frame!

art.nr.retrofit roof light: 23330020.

TECHNICAL DATA:

aperture size: 40 x 40 cm
 inner frame: 43 x 43 cm
 height of dome in the closed position: 78 mm
 roof thickness 25-60 mm
 material: dome of UV-resistant polycarbonate
 outer frame: ASA
 innerframe: polystyrol
 ventilation area (100cm²)
